Engineer with **15+ years** of hands-on software development experience, transitioning into **AI Engineering**. I bring deep expertise in backend architecture, API design, and system analysis—skills that form the exact foundation modern AI systems require. I don't just learn technology; I deconstruct it, understand it, and rebuild it. Currently architecting an **AI Codebase Intelligence Engine** using RAG, vector databases, and LLM APIs. I am looking for an environment where I can apply my engineering discipline to AI challenges, ramp up quickly, and contribute meaningfully from day one.

🚀 ACTIVE AI TRANSITION & HANDS-ON LEARNING

- LLM API Integration: Claude (Anthropic), OpenAI GPT
- RAG Architecture: Semantic chunking, vector databases, embeddings
- Prompt Engineering & System Prompt Design
- AI Fundamentals: Tokenization, context windows, AST-based parsing
- Quantum Computing: Completed Q# course; deep interest in quantum processor architecture

AI Codebase Intelligence Engine (In Development)

A SaaS product built on ASP.NET Core featuring code ingestion with AST-based parsing, semantic chunking for large codebase indexing, vector search integration, and LLM-powered code Q&A, bug detection, and automated documentation generation. github.com/FarahChannir/ai-codebase-intelligence-engine

⚡ PROFESSIONAL EXPERIENCE

Test Automation Engineer Jan 2023 – Present
Ametras · Remote

- Design and implement automated test frameworks using Python and Robot Framework for web and API testing across multiple projects.
- Build end-to-end test suites covering functional, regression, and integration testing; integrate into CI/CD pipelines for continuous quality validation.

💎 AI & EMERGING

LLM APIs

RAG

Vector DBs

Embeddings

Prompt Engineering

Claude API

OpenAI GPT

Q#

Quantum Computing

💎 BACKEND

C#

.NET Core 5-8

ASP.NET MVC

Python

C++

Java

SQL

REST APIs

JSON/XML

💎 FRONTEND

JavaScript

HTML/CSS

Razor Pages

Ajax

💎 DATA & TESTING

SQL Server

Robot Framework

- Develop reusable keyword libraries to accelerate test development and collaborate with developers to identify, reproduce, and document bugs—significantly reducing regression issues.
- Generate detailed HTML test reports with pass/fail breakdowns, screenshots, and execution logs for stakeholder visibility.

ASP.NET Developer Nov 2023 – Jan 2024

Vanishingincmagic · Istanbul, Turkey

- Engineered ASP.NET web applications with upgraded system features to enhance user experience and platform performance.
- Contributed to frontend development using JavaScript and HTML, improving UI quality and client satisfaction.

ASP.NET Developer Oct 2020 – Oct 2022

Pabeda · Istanbul, Turkey

- Developed ASP.NET web applications and mobile API systems, enhancing service availability and performance.
- Supported frontend development across multiple web applications, improving overall user engagement.

Game Software Developer Nov 2016 – May 2019

Game Power 7 · Damascus, Syria

- Architected game structures and built MVC-based control panels for enhanced gameplay management and admin operations.
- Developed backend game APIs and web application features; designed and implemented a new game server by intercepting and handling JSON data streams to replace a legacy system.

Software Developer & Systems Analyst Nov 2014 – Oct 2016

Space Toon · Damascus, Syria

- Engineered systems for web applications, smart speakers, and game backends; contributed to Android app development for Space Toon TV Guide.
- Built a JIRA-like task and workflow automation system to optimize team productivity and streamline cross-department operations.

Software Developer Nov 2008 – Present

Remote / Various Clients · Project-Based & Freelance

- Developed web applications and backend services for applications and games across gaming, e-commerce, and education sectors.
- Conducted systems analysis and troubleshooting on complex legacy systems; implemented best coding

Selenium

pytest

CI/CD

Git

◆ CORE STRENGTHS

Analytical Thinking — Reverse-engineer complex systems to understand inner workings.

Rapid Technology Adoption — Deep understanding of software principles enables fast mastery of new languages and frameworks.

System Architecture — Design scalable backends and control panels across diverse domains.

Problem Decomposition — Break abstract ideas into implementable, scalable solutions.

practices resulting in a 40% reduction in production bugs.

- Designed and implemented innovative control panels and backend systems; managed multiple concurrent projects under strict deadlines with consistent high-quality delivery.

✂ NOTABLE PROJECTS

AI Codebase Intelligence Engine — SaaS product with AST parsing, semantic chunking, LLM-powered Q&A and documentation generation. ASP.NET Core + Claude API + RAG + Vector Search.

Online Game Server Replacement — Reverse-engineered legacy protocol, intercepted JSON game data, built replacement server and custom admin control panel from scratch.

Educational Game Platform — 60+ interactive games with complex terminal data reading, real-time score calculation, progress tracking, and multi-role control panel.

Automated Web Testing Suite — Selenium/Robot Framework test runner with Word report generation, screenshot capture, email delivery, and dedicated management dashboard.

Rental & Leasing Management System — Full-featured system covering tenants, landlords, salary management, maintenance requests, and staff work-order tracking with full transparency.

Family Tree Application (Conference-Presented) — Windows Forms application with mouse-drawable interactive graphical interface, advanced filters, and complex relationship mapping.
